

COMBAT

Here are rules to determine when your character is able to endure exertion and injury to keep moving forward or when they're completely spent and collapsed in a heap.

When a character is in a fight, they are running, dodging, striking, and being struck and assailed by their foe. All of this stuff is scary and exhausting. So a character gets weaker the longer they're in this exchange, even if they're dodging every blow.

This weakening is represented by cards from your Deckahedron being lost into your **Exhaustion pile**.

Think of a boxing match or a mixed martial arts match. During the later rounds, the athletes are worn down, don't jump around the ring with as much vigor, and drop their guard more frequently. The contest is not always decided with a knockout punch, it often comes down to who can better endure the exertion.

PHASES

When your character gets attacked or falls victim to some other danger, you have choices about exactly how they are affected. They may dodge, and just lose Stamina, they may take Harm to absorb the blow with their armour (or with their face), or they may be wounded by the damage.

The **first phase** is rolling dice to arrive at a number, called the *attack power*.

The **second phase** is deciding how to split that number among 3 categories, Stamina, Harm, or Wounds.

The **third phase** is optional: absorbing some points using any relevant move cards and item cards.

Finally, the **fourth phase**: you interpret those results into the narrative. Did your character dive into the dirt? Did they take a punch to the jaw and respond with a bloodied grin? Did the spear bounce right off their steel breastplate?

SECOND PHASE

When you are hit in combat, you roll dice to get a number. Call this number the **attack power**.

If you don't split up the *attack power*, it translates directly into Stamina points. So by default, your character loses that amount of Stamina points.

Let's say your character was hit by a sword and the dice were rolled and summed up to 7. The simplest thing is to lose 7 Stamina points.

But maybe you only have 7 Stamina points left in your deck, and you don't want your character to be incapacitated. You have a couple options:

- **Turn attack power into Harm tokens at a rate of 3-for-1**
- **Turn attack power into Wound tokens at a rate of 6-for-1**

For example, you may split the attack power of 7 into:

- **4** Stamina points
- **1** Harm token

You may even do that twice, splitting the attack power of 7 into:

- **1** Stamina points
- **2** Harm tokens

Another option is to take a Wound. You may split the attack power of 7 into:

- **1** Stamina point
- **1** Wound token

Note: as described later, taking Wound and Harm tokens can sometimes also cause loss of Stamina points.

STAMINA / EXHAUSTION

Characters have 10 Stamina points. These points are represented by cards in your Deckahedron with a Stamina symbol

No Stamina symbol

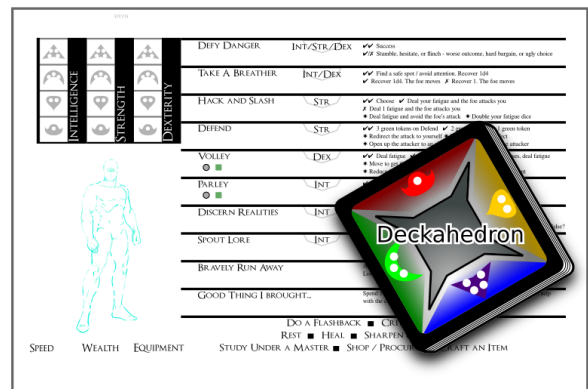

Stamina symbol

To win at combat, a character's foes must be subdued or pacified before the player's Deckahedron has been emptied of Stamina points.

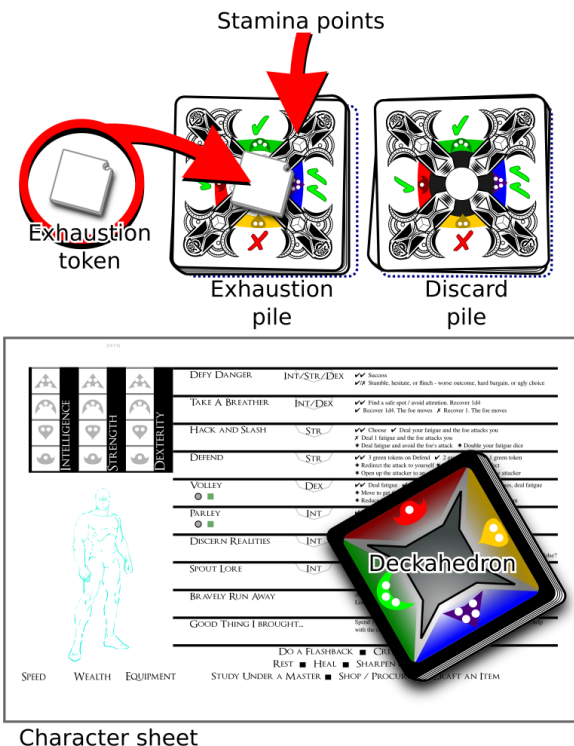

When you are instructed to lose a Stamina point, you may absorb it using any relevant move cards and item cards, otherwise:

1. reveal cards in your Deckahedron until you find a card with a Stamina symbol
2. put that card aside, face-up in your *Exhaustion pile*
3. the other revealed cards go into your *discard pile*

Character sheet

You should put an Exhaustion token on top of the *Exhaustion pile* to distinguish it from your *discard pile*. But, unlike Harm and Wound tokens, you don't have to put an Exhaustion token on the pile for each Stamina point lost, that's what the cards are for.

(So, if you were instructed to lose 3 Stamina points, you add 3 cards with Stamina symbols onto your Exhaustion pile)

If searching through their Deckahedron does not yield a card with a Stamina symbol, the player **must** reshuffle their *discard pile* into the Deckahedron and continue searching.

Note: Players *may* choose to reshuffle their *discard pile* back into the Deckahedron *before* searching for Stamina points.

If there are no Stamina points in the Deckahedron *or* the *discard pile*, then all 10 must be in the *Exhaustion pile*. In this case, the character is **incapacitated** and can take no further actions. It is up to the GM to decide what this incapacitation means - whether the character is dead, unconscious, or just unable to stand or move. The GM has rules for this, see the GM Guide.

HARM

Think of that boxing match again. If Stamina represents dancing, ducking, and dodging, then Harm represents landing a blow. These rules are also for representing mental strain that is so significant that the negative effects last for a while.

When you are instructed to take a Harm token, you may absorb it using any relevant move cards and item cards, otherwise:

- If you already have 2 Harm tokens on your Exhaustion pile:
 - ➔ Take a *Wound* instead
- Otherwise:
 1. Lose a Stamina point
 2. Place a *Harm* token on your Exhaustion pile

WOUNDS

Getting wounded sucks, and when wounded, all intelligent creatures seek to cure their condition as a very high priority.

When you are instructed to take a Wound token, you may absorb it using any relevant move cards and item cards, otherwise:

- **If you already have 2 wounds:**
 - ➔ the character is incapacitated
- **Otherwise:**
 1. the GM describes how the character was wounded
 2. Lose a Stamina point
 3. Place a *Wound token* on your *Exhaustion pile*
 4. Place a **Wound card** in your *discard pile*. It will now start cycling between your Deckahedron and your *discard pile*.

A WOUND CARD

Having a *Wound card* in your Deckahedron causes some nasty effects.

Whenever you **flip** and reveal a wound card, follow these rules:

- Say or act out the guttural noise emitted by your character
- You must immediately stop flipping (eg, if your the move instructed you to "flip 3", you stop short once you hit the wound card - resolve the move with only the card(s) you flipped. This overrides the **Complete Flip Rule**)
- Lose a stamina point
